Module Description

- This module allows the students to reflect major thoughts on theories of education and their implications in teaching and learning processes, curriculum, classroom management, and social changes.

- The general aim of the module is that the student should acquire knowledge of pedagogical theories of relevance to working with people.

Intended Learning Outcomes: Students will

Knowledge:-

- Have a broad understanding of pedagogy
- Have a good understanding of the meaning, philosophies, and theories of teaching

Intended Learning Outcomes: Students will

Skills:-

- Describe the basic view of different pedagogical orientations;
- Describe and reflect on different theories of motivation and learning;
- Evaluate how philosophy, thoughts, and theories of education affect learning processes.

Intended Learning Outcomes: Students will

Competence:-

- Become competent in planning, conducting, evaluating, and presenting teaching projects.
- Apply concepts related to communication theory through the teaching process.

Teaching Method may be used in the following ways:

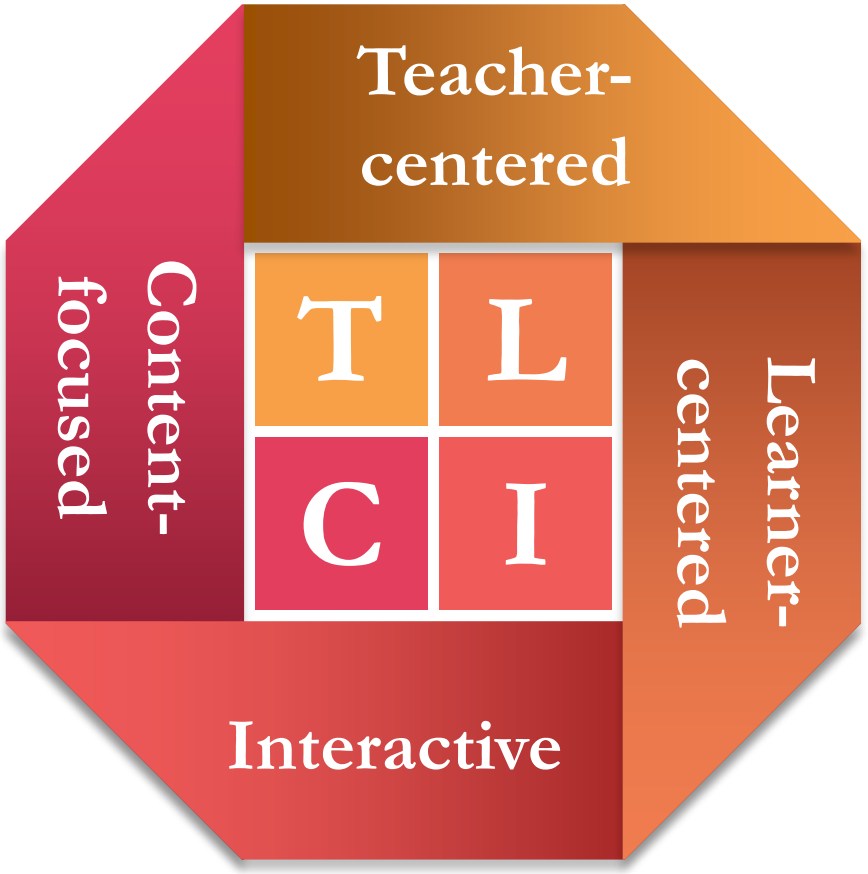

- Keeping an updated version of the course syllabus and calendar
- Providing course readings, bibliographies and other handouts
- Enabling student participation and interaction in discussion forums
- Communicating class notices, updates, assignment guidelines, and deadlines (generally by e-mail).
- Delivering course Lectures and Article Reviews

Types of Teaching Methods

Teacher-centered

Learner-centered

Content-focused

Interactive

Expectations

- Students will be expected to read and analyze material from the course handouts. They will also be expected to attend and participate in class.

- The course leader will attempt to provide interesting and informative material for them to read, give helpful lectures, provide activities that challenge and stimulate interest, be available to answer any questions they may have, and provide fair and timely evaluations of their achievement.

Academic Integrity

- Academic integrity is a basic guiding principle for all academic activity, allowing the pursuit of scholarly activity in an open, honest, and responsible manner. In according with the Code of Conduct, students must not engage in or tolerate academic dishonesty.
- This includes, but is not limited to cheating, plagiarism, fabrication of information or citations, facilitating acts of academic dishonesty by others, unauthorized possession of examinations, submitting work of another person, or work previously used without informing the lecturer, or tampering with the academic work of other students.

Course Structure

- This module will be delivered using a combination of Lectures and Article Reviews.
- The ethos of the module is that learning is a shared experience between all the participants.
- 11 Interactive lectures
- 2 Article Reviews with practical methods.

Course Structure

Week 1	Orientations to the Module Outline & Introduction
Week 2	Education, the Concept and Model of Pedagogy
Week 3	Pedagogical Content Knowledge & Approaches
Week 4	Article Reviews
Week 5	Curriculum Development & Design
Week 6	Course Planning
Week 7	Designing Syllabus

Prof. Abba Hailegebriel Girma (PhD, EdD)

Course Structure

Week 8	Mid-Exam
Week 9	Professional Ethics in Teaching
Week 10	Pedagogies of Religious Education
Week 11	Article Reviews
Week 12	Teaching Methods
Week 13	Classroom Management
Week 14	Methods of Assignments and Evaluation
Week 15	Presentation

Main Course Reference

Main Reference:

Assignment No.	Assessment type	Notes	% of formal assessment
1	Class Exercises	4 Exercises	4*5=20%
2	Mid term Exam or Article Review	1 Exam or Article Review	30%
3	Final Exam	1 Exam	50%

Key Words

Pedagogy
Andragogy
Heutagogy
Academagogy
Education
Curriculum

What is meant by Academagogy?

- The concept of academagogy is used as a mediating process of scholarly leading to balance the use of all three ***gogies***.
  - Pedagogy
  - Andragogy
  - Heutagogy
- McAuliffe et al., (2009) coined the term academagogy to propose a form of scholarly leading they saw as necessary to balance the integration of pedagogy, andragogy and heutagogy as necessary within the learning of any individual.
- McAuliffe et al., (2009) regarded the process of academagogy as "*operating at a meta-level, above the PAH continuum*"

What is your understanding of the term ‘Pedagogy’?

What is Pedagogy?

- Pedagogy is a term widely used in educational writing but all too often its meaning is assumed to be self-evident.
- Originally, the word pedagogy comes from the ancient Greek *paidagogeo*, literally 'to lead the child' and *paidagogos*, the slave who took children to and from school/ (boy leader).

- In other words, the *paidagogos* was a slave who supervised the education of his master's son and led him to school (so pedagogy is about walking the walk, or leading your learners).
- The word "*paida*" refers to children, which is why some people like to make the distinction between pedagogy (teaching children) and andragogy (teaching adults).

Pedagogy as a Discipline

- Pedagogy is:
  - the art or science of teaching or of being a teacher.
  - a study or science of ways and methods of teaching.
  - also sometimes referred to as the correct use of teaching strategies.
  - refers to strategies of instruction, or a style of instruction'.
  - also may be defined as the exploration of effective teaching and learning strategies.

Basic Principles of Pedagogy

- Learners need to know what their teachers teach.
- The learner's previous knowledge is of little consequence as a resource for learning. The essential components of the learning process are the teacher, the textbook, and supplemental educational materials.
- Learners become ready to learn what their teachers tell them they must learn to succeed in the course.
- Learners organize information according to the subject matter. Teachers must organize material in a logical manner.
- Learners are motivated by external factors (e.g., parental or teacher approval, good grades).

How do you define the term ‘Andragogy’?

What is Andragogy?

- From the Greek, literally means "adult-leading" (as opposed to pedagogy, which is "child-leading").
- Def: the art, science, profession of teaching adults.
- Knowles (1973) stated adults (as opposed to children) tend to be self-directed learners, have a vast knowledge base that can be tapped, rely on peers as resources, and are motivated to learn in order to solve problems and apply what they have learned.
- Knowles' theories emphasize the adult learner as self-directed, intrinsically motivated, and possessing relevant previous knowledge in most learning scenarios. The assumptions of the andragogical model differ significantly from those of the pedagogical model.

Andragogy (1)

- Some educational researchers will use the term "*andragogy*" when examining post-secondary school education.

- Knowles (1970) developed five assumptions that underline his theory of andragogy:
  - Adults are self-directed learners.
  - Adults bring a great deal of experience into the classroom.
  - Adults who seek education are ready to learn.
  - Adults are internally motivated.
  - Adults want problem-based learning.

Andragogy (2)

- Knowles did not view andragogy as a true epistemology. Instead, he viewed it as a concept rather than a theory.

- Knowles (1980) outlined a seven-step process for faculty to promote andragogy:
  - Develop cooperative learning environment
  - Involve learner in the setting of goals
  - Diagnose learner needs and interests
  - Help learner formulate objectives based on his/her interests and needs
  - Design sequential learning experiences to meet these objectives
  - Meet objectives with materials and resources
  - Evaluate the quality of learning and impact on future learning

Basic Principles of Andragogy

- Adults need to understand why they need to learn something.
- Adults are self-directed and have a deep psychological need to be acknowledged by others as capable of self-direction.
- Adults arrive in learning scenarios with a wider variety of knowledge and experience than children. This previous knowledge can be of assistance in a new learning situation but can also be a hindrance if it results in the individual being less open to new concepts. In either case, adults expect their prior experience to be acknowledged.
- Adults are task-centered learners. They become ready to learn subject matter based on the need for certain learning in order to cope with their lives.
- Although adults respond to external motivators like promotions or higher salaries, they are more motivated by intrinsic factors like self-esteem, job satisfaction, and quality of life (Knowles, et al., 2005).

What is ‘Heutagogy’?

Heutagogy (1)

- Heutagogy was first defined by Hase and Kenyon (2000) as a "*form of self-determined learning*" (p.1).

- Heutagogy is differentiated from andragogy in terms of who frames that starting point for learning to occur, in andragogy, there is an educator, in heutagogy, there is a student.

Heutagogy (2)

- A heutagogical design contains the following elements:
  - Learning contracts
  - Flexible curriculum
  - Learner-directed questions
  - Flexible and negotiated assessment (Blaschke, 2012)

- Course design elements can include:
  - Reflective journaling
  - Action Research which allows learners to experiment with real-life situations
  - Formative and summative assessment
  - Collaborative learning (Blaschke, 2012).
